

## MASSAGE AND MOISTURING OIL

**JUST...Love**, from **Just Pure Essentials**, is a massage and moisturizing oil product line made of plant-based oils infused with a variety of herbs.

**Just Pure Essentials** suggests that **JUST...Love** be used to moisturize the face and body and for facial cleansing and shaving. It has been recommended by women's health professionals as a lubricant and moisturizer to relieve vaginal dryness, says the manufacturer.

**Just Pure Essentials** products are 100% vegan; chemical and preservative free; and without alcohols, additives, or phytoestrogens. The base of each product is coconut medium-chain triglyceride (MCT) oil pressed from nongenetically modified coconut oil by a steam distillation process. The oil is blended with other organic oils and botanical ingredients, including green tea seed oil, French plum oil, argan, and marshmallow leaf. It does not contain dyes, perfumes, or artificial flavors. **Just Pure Essentials** says its formulas do not dry up and turn sticky.

## SEXUAL HEALTH AND WELLBEING

**pjur med** offers a line of sexual health and wellbeing

products that are both water- and silicon-based. Products have natural and nature-identical ingredients to treat vaginal dryness, especially during menopause, after long-term drug ingestion, or when hormonal balance may be disturbed by stress

or during pregnancy or lactation, resulting in insufficient natural moisture.

**pjur med** says that **PREMIUM glide** is specially formulated for dry or highly sensitive genital mucous membranes and is made of non-pore-blocking, high-quality silicones. **SENSITIVE glide** is specifically developed for those with very sensitive genital mucous membranes, according to the manufacturer. Both products are available in 3.4 fl oz bottles. **pjur med** suggests its products are suitable for every skin type and maintains that they are dermatologically tested and paraben-, glycerin-, and preservative-free. In addition, **pjur med** says its formulas have been kept as neutral as possible and the ingredients have been put together in a way that microbial growth cannot occur.
