

Appendix Table 4: Interrelationships among key outcome variables: Absolute values of Spearman rank correlations. Financial toxicity score is the sum of number of the following: whether the experience had been a drain on the family’s finances, whether the respondent had lost or changed jobs, whether a caregiver had taken time off from work, and whether all or most of savings had been used up.

	New cardiopulmonary symptoms	New disability	Self-rated recovery
New disability	0.30		
Self-rated recovery	0.47	0.39	
Financial toxicity score	0.09	0.16	0.17
