

Appendix Figure 10. Changes in Post-Discharge Spending Associated with Safety-Net Status among BPCI Hospitals, With Clustered Standard Errors and Without Hospital Fixed Effects (2013-2016)

Notes: BPCI=Bundled Payments for Care Improvement. SNH=Safety-Net Hospital. This figure shows results based on difference-in-differences analyses in which a negative change reflects differentially lower spending and a positive change reflects differentially higher spending. This figure shows that among BPCI hospitals, safety-net status was not associated with differential changes in post-discharge spending for medical condition episodes.
