

Appendix Figure 14. Changes in Secondary Outcomes Associated with Safety-Net Status among BPCI Hospitals, With Logit Link, Binomial Distribution, and Without Hospital Fixed Effects (2013-2016)

Notes: BPCI=Bundled Payments for Care Improvement. HHA=Home Health Agency. PAC=Post-Acute Care. SNH=Safety-Net Hospital. This figure shows results based on difference-in-differences analyses in which an Odds Ratio <1 reflects a differentially less frequent outcome and an Odds Ratio >1 reflects a differentially more frequent outcome. This figure shows that among BPCI hospitals, safety-net status was associated with differential changes in discharges to institutional PAC providers and HHA for medical condition episodes.
