

Appendix Figure 5. Changes in Secondary Outcomes Associated with BPCI Participation among Safety-Net Hospitals (2013-2016)

Notes: BPCI=Bundled Payments for Care Improvement. HHA=Home Health Agency. PAC=Post-Acute Care. SNH=Safety-Net Hospital. This figure shows results based on difference-in-differences analyses in which a negative change reflects a differentially less frequent outcome and a positive change reflects a differentially more frequent outcome. This figure shows that among safety-net hospitals, BPCI participation was associated with more frequent discharges to institutional post-acute care providers for medical condition episodes.
