

Appendix Figure 1. Proportions seropositive for SARS-CoV-2 among tested healthcare workers residing in NYC by job function and work location. Panel A shows proportions SARS-CoV-2 antibody positive and negative based on different job functions within the institution. Panel B

shows proportions SARS-CoV-2 antibody positive and negative based on different work locations. Red is antibody positive, purple antibody negative. The numbers and percent of healthcare workers within each stacked bar are shown. This data is drawn from the group of 1,928 healthcare workers (HCWs) residing in NYC who were tested.
