

Hospital Quality Database Called Good for Patients

BY JOYCE FRIEDEN

Associate Editor, Practice Trends

WASHINGTON — The new database on hospital quality from the Centers for Medicare and Medicaid Services may herald a new era in patient assertiveness in terms of health care preferences, several experts said at a briefing sponsored by the Alliance for Health Reform.

“We’re beginning a change in how doctor-patient relations are established and [considering] how paternalistic they have been, I think we’ll see major changes in the future where they become less that way,” said Elliot Sussman, M.D., president and CEO of Lehigh Valley Hospital and Health Network in Allentown, Pa.

“When people come into a community, they’ll look at measures like this and say, ‘Which are the kinds of places I want to be cared for at, and who are doctors on staff at those places?’” he pointed out.

‘We can’t underestimate the impact that transparency has on changing everything. I feel very optimistic this will lead to lots of positive changes.’

In fact, such changes have already begun to occur, he said. “We’ve seen experiences where people change their doctor relationship because I really like Dr. Jones, but he’s not on the staff of what seems to be the best hospital. Either

he does that or I’m going to find myself a new physician.”

CMS launched its “Hospital Compare” database on April 1.

Available online at www.hospitalcompare.hhs.gov, the database looks at hospital performance on 17 different measures related to the treatment of three conditions: heart attacks, heart failure, and pneumonia.

Users can search by hospital name or geographic location.

Gerald M. Shea, assistant to the president for government affairs at the AFL-CIO, said that the feeling of partnership that comes from empowering consumers should spill over onto the physician side of the equation.

“I could make the argument that there are very serious limits to how much consumers can drive change in the health decision-making process,” he said. “An equally fruitful strategy would be trying to change the preparation and education of physicians, so they come to this suggesting that a partnership would be a good idea.”

In fact, physicians also have much to gain from being able to access hospital quality data, said Margaret E. O’Kane, president of the National Committee for Quality Assurance.

“Physicians have been working in an information vacuum as well—both doctors involved in performing particular procedures in the hospital, and the primary care physicians who are making referrals

to specialists,” she said. “We can’t underestimate the impact that transparency has on changing everything. I feel very optimistic this will lead to lots of positive changes.”

One panelist warned that empowerment does have its limits.

Charles N. “Chip” Kahn, who is president of the Federation of American Hospitals, said that as databases such as Hospital Compare begin to add more measures, “it will be more and more dif-

ficult for the average consumer ... to figure things out other than, ‘This is either an okay place or a dreadful place’ and you obviously want to stay away from dreadful places.”

In the end, he commented, databases like this “are more about using accountability to improve care than they are about consumers making more decisions.”

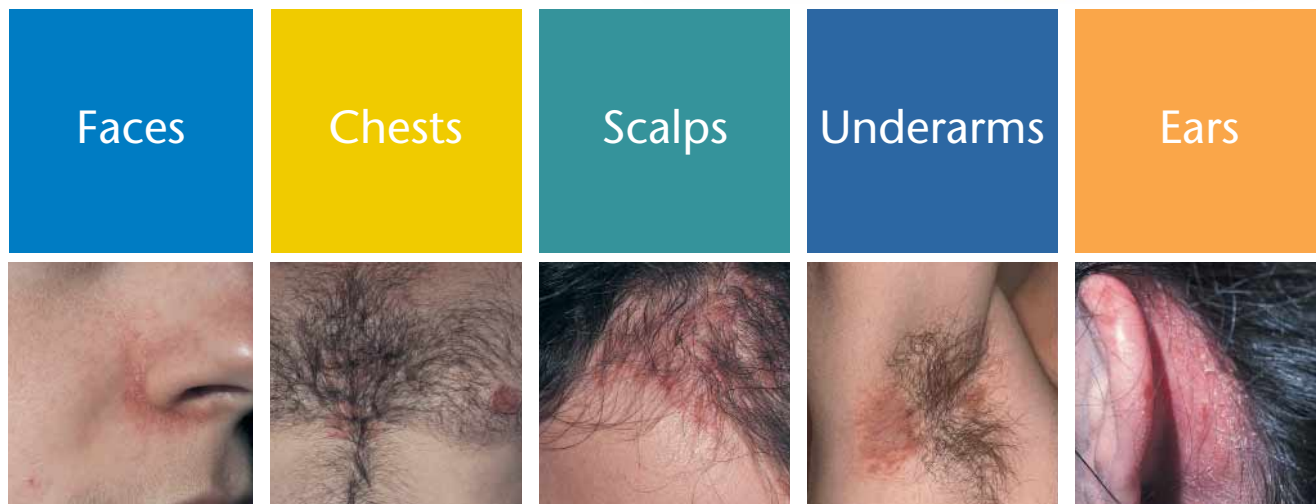

Ms. O’Kane said she was confident that “intermediaries” would become

available to help consumers interpret the database information. And she also had a prediction.

“What we’ve seen so far is not hospitals that are excellent at everything or terrible at everything, but hospitals that are excellent at one thing and maybe not so great at others.

“As process engineering becomes more core to the hospitals, you’ll see hospitals that will break out and be excellent across the board.”

Choices for every body

The Ovace® family of products—greater flexibility for treating seborrheic dermatitis.

Ovace is the most complete family of products that effectively reduces the signs and symptoms of seborrheic dermatitis. The four effective, nonsteroidal, nonsulfur, sodium sulfacetamide therapies offer more flexibility than ever before. Treating all different skin types and all different areas of the body.

Ovace. What patients need, exactly where they need it.

Ovace is contraindicated in persons with known or suspected hypersensitivity to sulfonamides or to any of the ingredients of the products. Reports of irritation and hypersensitivity to sodium sulfacetamide are uncommon. Instances of Stevens-Johnson syndrome and systemic lupus erythematosus have been reported with sulfonamides. Please see full prescribing information.

OVACE®
{SODIUM SULFACETAMIDE 10%}
CREAM, GEL, FOAM, WASH
