## Erratum

Due to a submission error, the article “Reduced Degree of Irritation During a Second Cycle of Ingenol Mebutate Gel 0.015% for the Treatment of Actinic Keratosis” (*Cutis*. 2015;95:47-51) contained the incorrect scale for local skin reactions (LSRs). The text in the Methods should have stated:

Using standardized photographic guides, 6 individual LSRs—erythema, flaking/scaling, crusting, swelling, vesiculation/pustulation, and erosion/ulceration—were assessed on a scale of 0 (none) to 4 (severe), with higher numbers indicating more severe reactions.

The staff of *Cutis*<sup>®</sup> makes every possible effort to ensure accuracy in its articles and apologizes for the mistake.
