## Decreasing Hypoglycemia following Insulin Administration for Inpatient Hyperkalemia

Allen Vinh Tran, PharmD<sup>1</sup>, Robert J Rushakoff, MD<sup>2\*</sup>, Priya Prasad, PhD<sup>3</sup>, Sara G Murray, MD, MAS<sup>3</sup>, Bradley Monash, MD<sup>3</sup>, Heidemarie Macmaster, PharmD<sup>4</sup>

<sup>1</sup>School of Pharmacy, University of California, San Francisco, California; <sup>2</sup>Division of Endocrinology and Metabolism, University of California, San Francisco, California; <sup>3</sup>Division of Hospital Medicine, University of California, San Francisco, California; <sup>4</sup>Institute for Nursing Excellence, University of California, San Francisco, California, Currently at Lahey Health System, Burlington, Massachusetts).

A correction has been made to the Figure. A dosage was incorrect in the Orderset 1.1 (1/1/16-3/19/17) box. The figure listed **Insulin 19 Units IV x 1** and should have been **Insulin 10 Units IV x 1**. Below is the corrected figure.

**FIG.** Flow Diagram Displaying the Study Cohort's Inclusion and Exclusion Criteria Abbreviation: POCT, point of care testing.
